Full project showcase and skill breakdown available at portfolio link above.

### SUMMARY

---

Fullstack Web3 Developer with 5+ years of experience, beginning as a Frontend Developer in 2020 before transitioning into the Web3 space in early 2023. I specialize in high-quality frontend execution while holding the ability to contribute across the full stack — from backend APIs to Solidity smart contracts. My focus is on bridging complex decentralized protocols with seamless, performant user experiences that real communities actually enjoy using.

### WORK EXPERIENCE

---

#### Fullstack Web3 Developer, Imaginary Ones Pte Ltd

Feb 2023 - Feb 2026

Recruited directly from OFFEO by the same leadership team to join their new Web3 venture — initially in a dual-capacity role maintaining legacy platforms through Dec 2023 while building new Web3 products from the ground up.

- Architected and delivered high-performance UIs for the Imaginary Ones ecosystem, supporting complex Web3 functionalities across desktop and mobile — with consistently positive community reception and minimal UX-related friction reported across all major product launches.
- Led frontend integration with blockchain protocols for NFT/token staking, rewards, airdrops, and preorder campaigns, with supporting contributions to Solidity smart contract development.
- Built a modular, reusable suite of gamified UI mechanics (Wheel games, Gashapon) for Imaginary Carnival, enabling seamless white-labeling and logic-sharing for major brand partners including Shiba Inu and Pucca.
- Collaborating on [Bubio.ai](#) — an AI companion chat platform — contributing across the full stack, including frontend architecture, backend development, and PostgreSQL database design with Row-Level Security (RLS) implementation.

#### Frontend Developer, OFFEO Pte Ltd

Aug 2020 - Dec 2023

- Developed and maintained four production-scale web platforms using Vue.js and Nuxt.js — spanning high-traffic landing pages, user dashboards, a custom CMS, and a core creative canvas editor.
- Contributed to the internal Storybook UI component library by building new components and maintaining existing ones, improving development velocity and visual consistency across multiple sub-projects.
- Engineered mobile-to-desktop responsiveness across complex interfaces, ensuring consistent user experience at every screen size and device category.
- Streamlined frontend-to-backend communication through RESTful API integrations and efficient state management solutions for complex, real-time data flows.
- Improved codebase reliability by implementing unit tests for critical application modules, reducing production bugs and improving long-term maintainability.

### SKILLS

---

**Frontend:** VueJS, NuxtJS, ReactJS, NextJS, Javascript, Typescript, Vuetify, Tailwind CSS, GSAP.

**Backend:** NodeJS, NestJS, ExpressJS, Supabase.

**Database:** MySQL, PostgreSQL.

**Blockchain:** Solidity, Hardhat, Web3.js, Ethers.js, Viem.

**State Management:** Pinia, Tanstack Query, Zustand.

**Unit Testing:** Jest.

### EDUCATION

---

#### Bachelor of Information System

2019 - 2023

Universitas internasional Batam | GPA **3.78 / 4.00**

#### Full stack Web Development

2020

Glints Academy x Impact Byte — Batch 6
